treeclimbR

Group AGroup B

Samples from different conditions (groups)

Entity 1:

Entity 2:

Entity n:

Are some entities differentially abundant between groups?

Group AGroup B

Entity 1:

Entity 2:

Entity n:

**Microbial data**Soil \longleftrightarrow OceanOral \longleftrightarrow SkinDay 1 \longleftrightarrow Day 2

Microbial species

Differential
abundance?**Single cell data**control \longleftrightarrow stimulated

Cell types or genes

Differential
abundance or
states?

Group A

Entity 1:

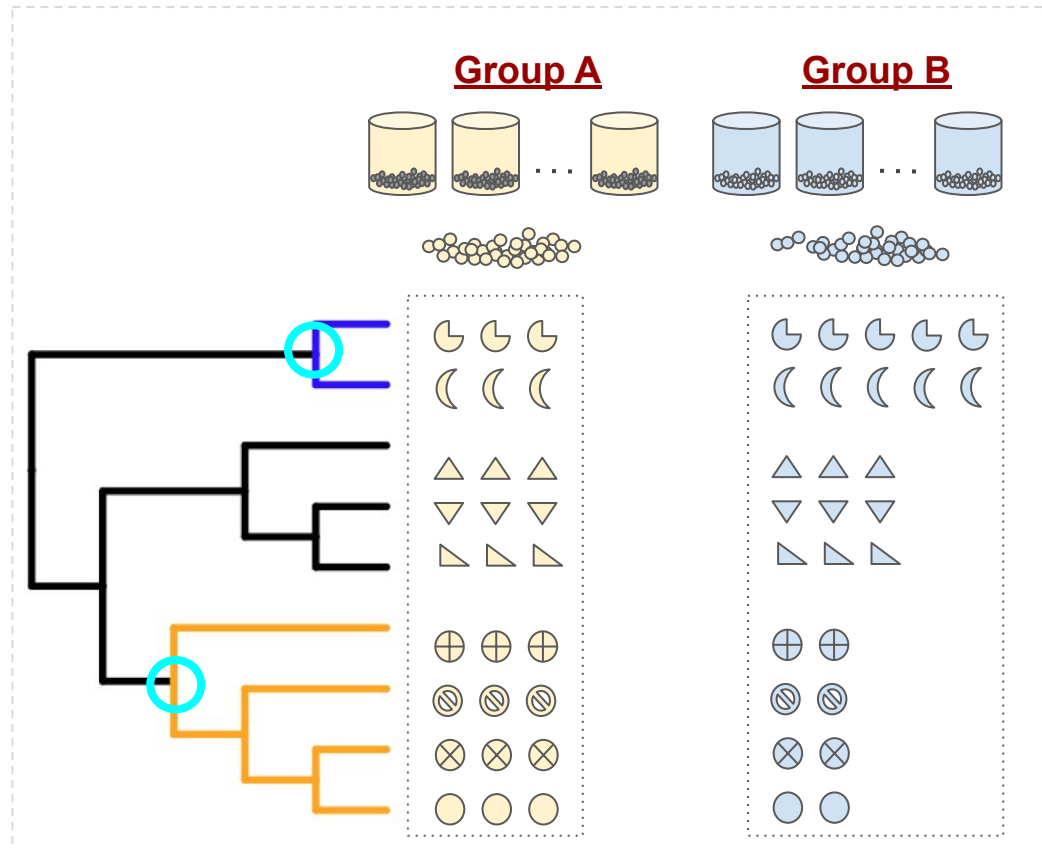

Entity 2:

Entity n:

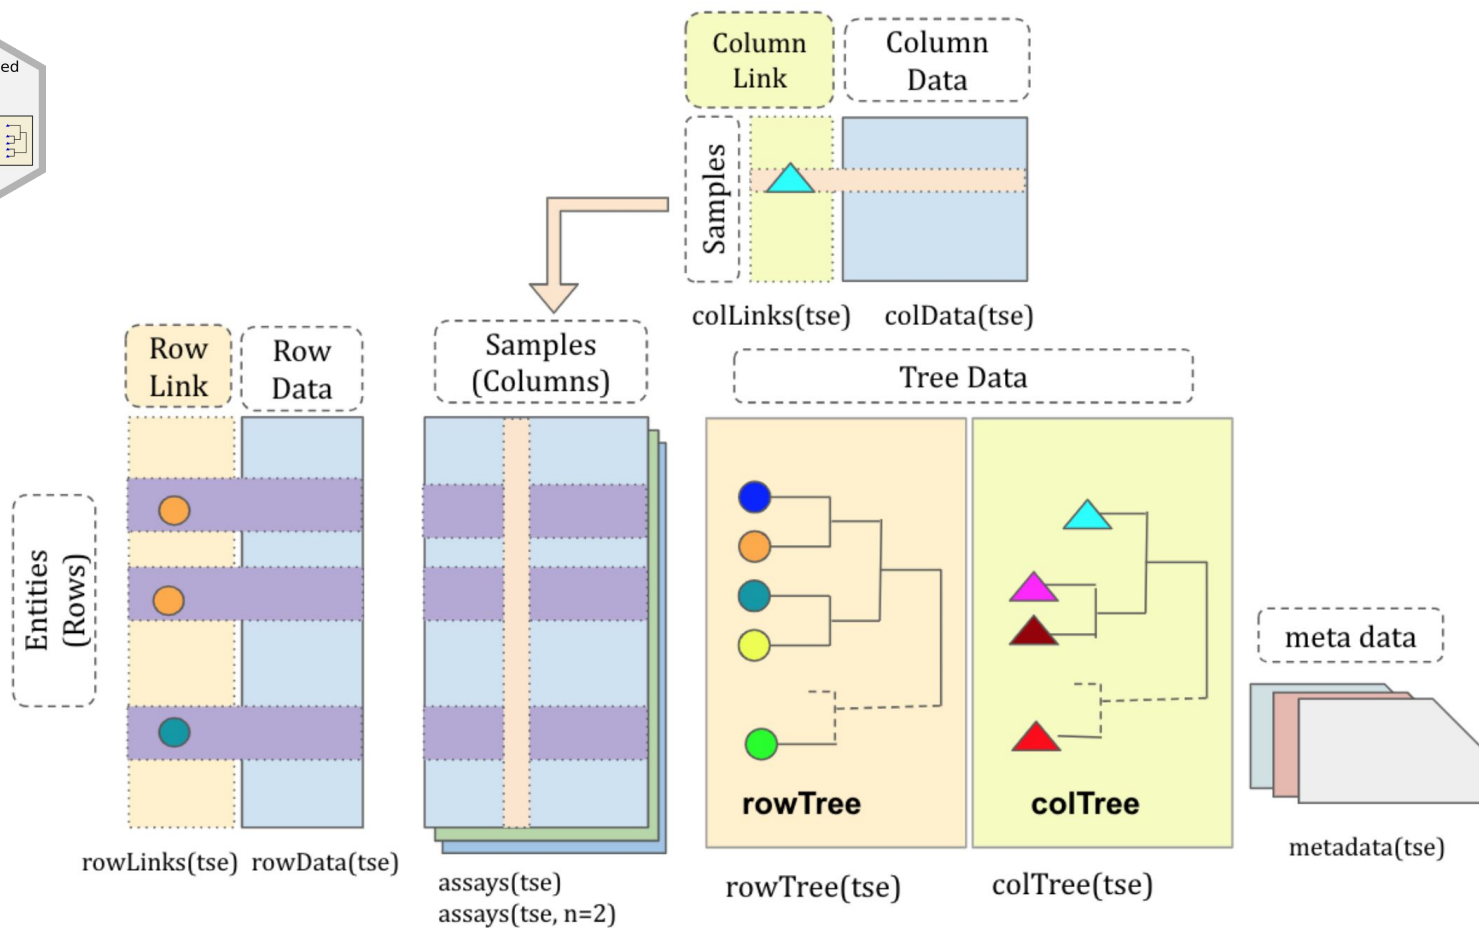

Group B**Issues:**

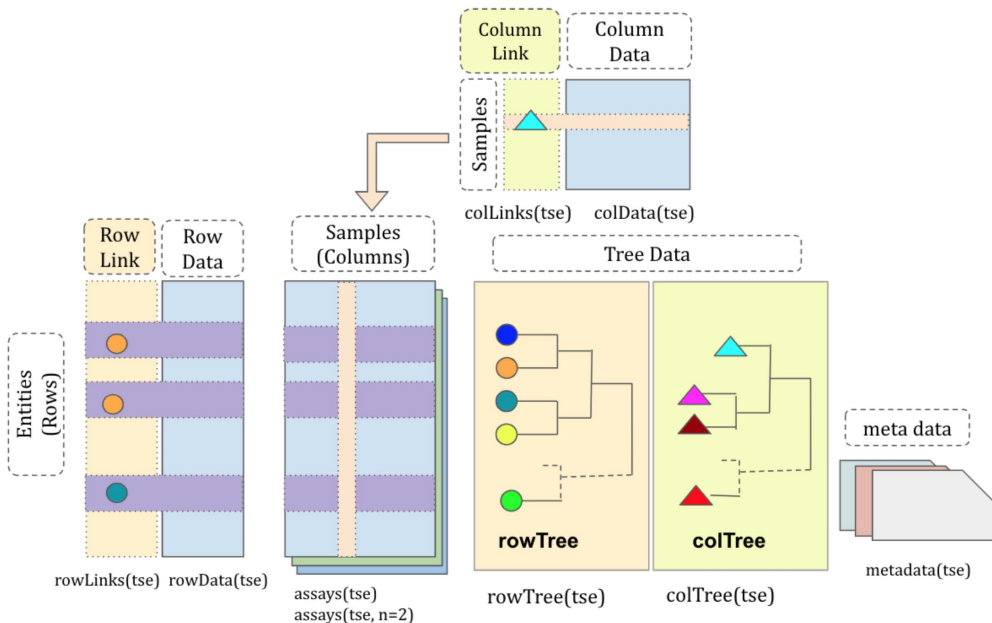

1. Result is long
2. Difference is small

**Goal:**

Which level on the tree to interpret the difference?

An arbitrary level **X**

```
> rowLinks(lse)
```

LinkDataFrame with 100 rows and 4 columns

| | nodeLab | nodeLab_alias | nodeNum | isLeaf |
|---|-------------|---------------|-----------|-----------|
| | <character> | <character> | <integer> | <logical> |
| 1 | t73 | alias_1 | 1 | TRUE |
| 2 | t67 | alias_2 | 2 | TRUE |

```
> lse <- TreeSummarizedExperiment(assays = count,
+                               colData = sample_data,
+                               rowData = entity_data,
+                               rowTree = tree,
+                               rowNodeLab = lab)
```

```
> lse
```

rowLinks: a LinkDataFrame (100 rows)
```

```
rowTree: a phylo (100 leaves)
```

```
colLinks: NULL
```

```
colTree: NULL
```

100 entities,
20 samples (10 in group C1, 10 in group C2)
Tree: 100 leaves (entity \leftarrow \rightarrow leaf)

Expression

S3

- other
- decrease
- increase

Expression

S3

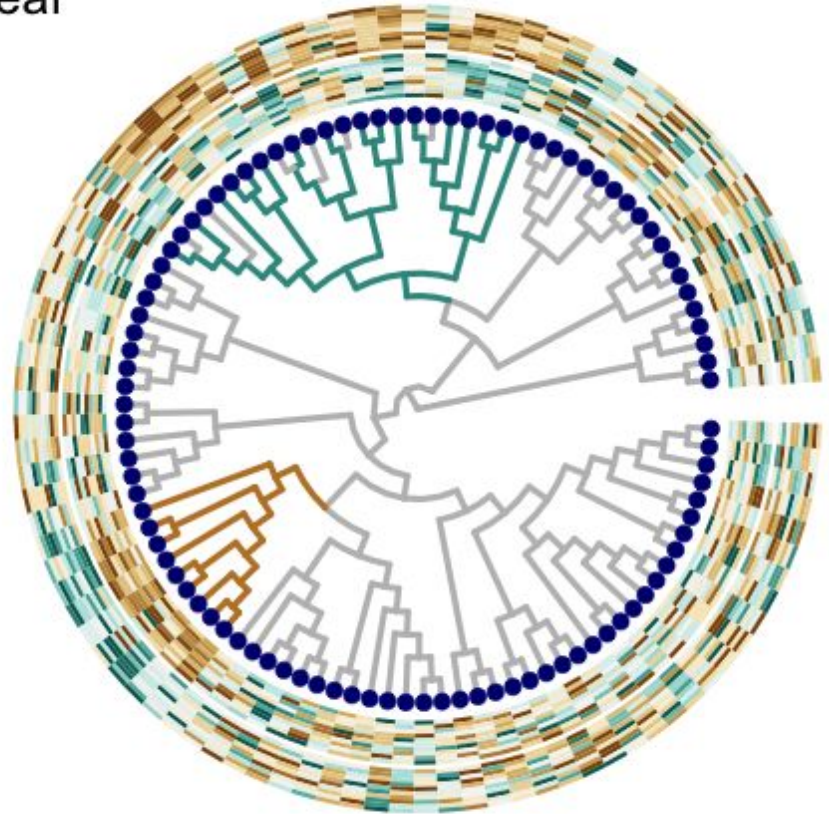

Based on : ggtree + ggplot2

$t = \text{leaf}$

1. Find candidate levels
2. Pick the best candidate

$t = 0.01$

1. Find candidate levels
2. Pick the best candidate

$t = 0.05$

1. Find candidate levels
2. Pick the best candidate

$t = 0.1$

1. Find candidate levels
2. Pick the best candidate

$t = 0.2$

1. Find candidate levels
2. Pick the best candidate

$t = 0.5$

1. Find candidate levels
2. Pick the best candidate

 $t = 1$

1. Find candidate levels
2. Pick the best candidate

data-driven

1. Find candidate levels
2. **Pick the best candidate**

data-driven

1. Find candidate levels
2. **Pick the best candidate**
3. **Perform the multiple hypothesis correction**

 **Detected**
